

Landpro surveys Christchurch from above
Aerial surveying project underway

Christchurch, NZ, 25th January 2021: If you've noticed a small plane flying around over Christchurch recently, it may be Landpro working on its latest aerial survey project, to learn more about the changing shape of our city.

Landpro specialises in land surveying, mapping and planning throughout New Zealand and is currently using their twin-prop aircraft for a large-scale project in Christchurch.

Mike Borthwick, Director says surveying and mapping helps to ensure efficient development and use of land.

"We are often involved in regional, environmental and Resource Management planning, for which aerial and land surveys are essential" Mike says. "Aerial survey allows for the right accuracy, resolution and detail for more large-scale jobs and our team of planners and scientists use the information to ensure the best strategies are applied."

The aircraft ZK-SVY is currently undertaking a high-resolution survey of the greater Christchurch area. The data from this survey will enable Christchurch to lead the way in sustainable and efficient design and development in future.

Mike says completing this survey will require a large number of flight lines backwards and forwards over the city. He says to keep the amount of flying to a minimum, operations are being scheduled outside commercial airline flight operations times, which means some night time operations.

"We are working closely with Airways Corporation, who control the airspace around Christchurch," he says. "All our aerial surveying complies with air safety regulations. This includes flying above 3000ft and operating within specific hours set by Airways to avoid interfering with commercial flight paths. We realise this may be an unwelcome annoyance for some, and apologise to anyone our aerial work has disrupted."

Landpro says the aerial work won't last much longer – the company expects to complete the project within the next two weeks, subject to weather.

Please see landpro.co.nz for details of upcoming flight times in urban areas.

About Landpro:

Landpro is a multi-disciplinary team of experts whose experience covers all aspects of Surveying, Planning and Resource Management, Environmental Science, and Geospatial Consultancy. At Landpro our purpose is create and inspire sustainable solutions through expertise, innovation and technology.
